Teradyne Names Huawei 2008 Strategic Technology Partner

NORTH READING, Mass. – September 1, 2009 – Teradyne, Inc. (NYSE:TER), the industry's leading manufacturer of Printed Circuit Board (PCB) test and inspection systems, has named Huawei its 2008 "Strategic Technology Partner." Huawei is a leading provider of next-generation telecommunication solutions for companies around the world. Its key contract manufacturing suppliers have ordered multiple Teradyne TestStation™ LH systems during the first half of 2009 to test Huawei's latest generation, 3G telecommunication equipment.

Huawei, a long-time customer of Teradyne, has leveraged the capabilities of Teradyne's TestStation LH in-circuit test systems to test advanced PCB technologies. Huawei values the TestStation's unique SafeTest™ protection technology which safely tests their low-voltage, state-of-the-art digital devices. The system's flexible architecture allowed Huawei to customize a boundary scan test solution to meet their specific needs. And the high accuracy instruments and dedicated system controller provide exceptional diagnostic accuracy and test throughput.

"Huawei has been a valuable partner to Teradyne over the last several years," said David Hyer, general manager, Teradyne Commercial Board Test group. "They have provided input on new features for TestStation development and worked closely with Teradyne's engineering group in development and verification of new product releases. Without this help, we would not have such a complete solution in test program development and production. Huawei have been especially helpful in improving the 'user friendliness' of our products for the Asia market. We're proud to name Huawei our 2008 Strategic Technology Partner."

"Huawei is able to ensure that it has a robust supply chain able to fully support its efforts in transforming All-IP networks for the future," said Richard Zhuang, manager of Huawei's Test & Auto Test Equipment Department.
