

Environmental Policy Statement

Teradyne conducts Process Design, Assembly, Marketing, Repair and Servicing of Test Equipment from New Product Conception through Mature Production.

We recognize that business activities impact the environment. Teradyne is committed to managing its activities that could potentially impact the environment in a responsible and effective manner. Teradyne will continually strive to improve its environmental performance, consistent with other business objectives and regularly sets documented objectives and targets and monitors progress in achieving them.

In working towards minimizing environmental impacts associated with our activities Teradyne:

- As a minimum standard, seeks to comply with applicable environmental regulations and standards to which we subscribe.
- Supports pollution prevention and minimization programs.
- Using materials and energy efficiently to conserve natural resources.
- Work to minimize where feasible, emissions that contribute to climate change.
- Reviewing environmental objectives and monitoring performance.

This policy is communicated to all employees and those working on behalf of Teradyne, and is made available to the public when requested. It is the responsibility of all employees to ensure that the policy is applied at all times.
